

REVENUE ANALYSIS REPORT

Annual Performance Summary — FY2015 to FY2018

Prepared for
Executive Leadership & Sales Operations

Reporting Period
January 2015 – December 2018

Report Generated by
Md Saleh

Date Prepared
June 19, 2026

Executive Summary

Between January 2015 and December 2018, the business generated \$2.94M in total revenue across 10,000 orders placed by 795 customers, yielding \$372.83K in profit at an average discount rate of 0.10. Quantity sold totaled 38,000 units over the period. Performance was broadly positive, with revenue and profit climbing year over year, though monthly results show clear seasonal swings and a small number of soft months that merit attention.

Profitability is heavily concentrated in the Office Supplies and Technology categories, the Central region outperforms North and South on both revenue and profit, and Damala Kotsonis is the leading sales representative, accounting for over half of attributed regional revenue. Returns have risen each year of the period, a trend that should be investigated alongside the strong topline growth.

Key Performance Indicators

The table below summarizes the six headline metrics tracked on the Revenue Analysis dashboard for the full reporting period.

TOTAL CUSTOMERS 795	TOTAL ORDERS 10K	REVENUE \$2.94M
QUANTITY SOLD 38K	PROFIT \$372.83K	AVG. DISCOUNT 0.10

At an average discount of 10%, profit represents approximately 12.7% of total revenue (\$372.83K profit on \$2.94M revenue), indicating a relatively thin but consistent margin structure across the portfolio.

Revenue and Profit Trend (Monthly, Aggregated 2015–2018)

Revenue follows a clearly seasonal pattern across the year. The first half of the year opens at a moderate \$176.82K in January and softens through Q1 to a low of \$148.31K in March, before climbing steadily into a strong early-summer peak of \$335.07K in June. A sharp pullback follows in July to \$187.13K, then revenue rebuilds to the year's highest points: \$375.49K in August and \$357.79K in September.

The final quarter repeats the same boom-and-pullback pattern seen mid-year — revenue falls sharply to \$159.69K in October before recovering to \$337.1K in November and closing the year at \$362.09K in December. Profit tracks a far flatter line throughout, ranging narrowly between \$17.63K (March) and \$53.44K (September), meaning profit margins compress noticeably during the high-revenue spikes in June, August, and December.

Figure 1: Source dashboard — Revenue Analysis (Power BI)

Month	Revenue	Profit
Jan	\$176.82K	\$23.66K
Feb	\$156.53K	\$20.49K
Mar	\$148.31K	\$17.63K
Apr	\$169.67K	\$19.79K
May	\$172.40K	\$23.31K
Jun	\$335.07K	\$38.15K
Jul	\$187.13K	\$22.30K
Aug	\$375.49K	\$49.80K
Sep	\$357.79K	\$53.44K
Oct	\$159.69K	\$24.83K
Nov	\$337.10K	\$36.57K
Dec	\$362.09K	\$42.87K

Table 1: Monthly revenue and profit, aggregated across 2015–2018.

Revenue and Profit by Category

Technology leads all categories in revenue at \$1,112.68K, narrowly ahead of Office Supplies at \$1,046.31K, while Furniture trails well behind at \$779.1K. Profit tells a different story: Office Supplies generates the most profit at \$159.71K despite ranking second in revenue, while Technology produces \$144.27K and Furniture the least at \$68.85K.

This implies Office Supplies carries the strongest profit margin of the three categories (roughly 15.3% of its revenue), Technology is mid-pack (about 13.0%), and Furniture is comparatively the weakest performer on profitability (about 8.8%), despite reasonable revenue volume.

Category	Revenue	Profit	Profit Margin
Technology	\$1,112.68K	\$144.27K	~13.0%
Office Supplies	\$1,046.31K	\$159.71K	~15.3%
Furniture	\$779.10K	\$68.85K	~8.8%

Table 2: Revenue, profit, and estimated profit margin by product category.

Revenue and Profit by Region

The Central region is the clear revenue and profit leader, generating \$1,720.55K in revenue and \$215.53K in profit — roughly 2.7 times the revenue of either North or South. North contributes \$625.57K in revenue and \$91.78K in profit, while South contributes a comparable \$591.96K in revenue but the lowest profit of the three regions at \$65.52K.

North converts revenue to profit most efficiently of the three regions (about 14.7% margin), followed by Central (about 12.5%), while South lags behind at roughly 11.1%, despite revenue levels similar to North. This suggests an opportunity to examine pricing, discounting, or cost-to-serve practices specific to the South region.

Region	Revenue	Profit	Profit Margin
Central	\$1,720.55K	\$215.53K	~12.5%
North	\$625.57K	\$91.78K	~14.7%
South	\$591.96K	\$65.52K	~11.1%

Table 3: Revenue, profit, and estimated profit margin by region.

Sales Representative Performance

Revenue attributed across the three named sales representatives is led decisively by Damala Kotsonis, who accounts for \$1,720.55K, or 58.56% of the segmented total. Emily Burns follows with \$625.57K (21.29%), and Ross DeVincentis closely trails with \$591.96K (20.15%). Damala Kotsonis alone generates nearly three times the revenue of either of the other two representatives.

Sales Representative	Revenue	Share of Total
Damala Kotsonis	\$1,720.55K	58.56%
Emily Burns	\$625.57K	21.29%
Ross DeVincentis	\$591.96K	20.15%

Table 4: Revenue contribution and percentage share by sales representative.

Returns Analysis

Total returns have increased every year of the reporting period: from 89 in 2015, to 146 in 2016, to 177 in 2017, and 223 in 2018, summing to 635 total returns across the four years. This represents a 150.6% increase in annual return volume from 2015 to 2018, a substantially faster growth rate than the corresponding rise in revenue and order volume over the same period.

Year	Total Returns	Year-over-Year Change
2015	89	—
2016	146	+64.0%
2017	177	+21.2%
2018	223	+26.0%
Total	635	—

Table 5: Total returns by year, with year-over-year percentage change. Given the consistent upward trend, a deeper investigation into return causes — by category, region, or representative — is recommended.

Sales Performance Against Target

Actual revenue of \$2.94M sits below the stated target sales ceiling of \$4.34M, placing performance at approximately 67.7% of target for the period. The minimum reference point on the same scale is \$0M, meaning the business has captured roughly two-thirds of the addressable target range, leaving meaningful headroom for growth in the next planning cycle.

Key Observations

- Revenue is strongly seasonal, with pronounced peaks in June, August–September, and November–December, and corresponding troughs in March, July, and October.
- Profit margins compress during the highest-revenue months, suggesting heavier discounting or cost pressure during peak demand periods.
- Office Supplies delivers the best profit margin of the three categories despite trailing Technology in revenue.
- Furniture is the weakest category on profitability and warrants a pricing or cost review.
- Central region drives the large majority of regional revenue and profit, while South underperforms North on margin despite similar revenue.
- Damala Kotsonis contributes more revenue than the other two sales representatives combined.
- Returns have grown every year and at a faster rate than revenue growth, an emerging risk to monitor closely.
- Current revenue tracks at roughly 68% of the defined target ceiling, indicating room for continued growth.

Recommendations

- Investigate the rising return rate by category and region to identify and address root causes before it further erodes margin.
- Review discounting practices in peak months (June, August, September, November, December) to protect profit margin during high-demand periods.
- Evaluate Furniture category pricing and supplier costs to bring its margin closer in line with Office Supplies and Technology.
- Examine the South region's cost-to-serve and discount levels relative to North, given its comparable revenue but weaker margin.
- Document and scale the practices driving Damala Kotsonis's outsized performance across the wider sales team.
- Set a phased revenue growth plan to close the remaining gap to the \$4.34M target, using Q1, Q3 (Oct), and Q1-equivalent soft months as focus periods for targeted campaigns.

This report is based on the Revenue Analysis dashboard data for the period January 2015 through December 2018. Figures are presented as reported on the dashboard; minor rounding differences may exist between category, regional, and monthly totals.
